CHALLENGE

Suez PCB Decontamination sought to streamline its decontamination process as well as its sales and billing process. Subsequently, the company wanted to integrate in SAP their sales invoices generated by Odoo.

SOLUTION

Eezee-it has developed a specific decontamination module for Suez. The decontamination process can possibly start at the time of the decontamination offer and ends with invoicing. This stream is fully integrated with the Odoo Standard features. It involves following the decontamination process from an operational point of view and issuing certificates to customers.

Subsequently, Eezee-it also implemented an integration to import invoices into SAP.

RESULTS

Suez PCB Decontamination can now count on a completely fluid decontamination process, with certificate

delivery and automatic billing.
